Carlini Torque Arms for Evolution Big Twin Motors

By adding a rigid brace between the engine case and the transmission on the right side of the powertrain, Carlini torque arms add chassis stability and reduce torque stress on inner primary covers. They're made of CNC-machined, chrome-plated billet aluminum, and attach at the engine nose cone and transmission end cover to create a rigid assembly.

'Groove' Design

- 37330 Fits all Softail models from 87-99
- 37331 Fits all Dyna Glide models from 91-98
- 37332 Fits all FXR models from 87-98
- 37333 Fits 5-speed FLT, FLHT, FLHS and Road King models from 87-98
- 37354 Fits Softail models using S&S 4" bore motors
