

Baker Synchronous Belt Drive Kits 2 3/8"

Baker has been making transmission pulleys for years, both aluminum and steel. In short, the teeth on the aluminum pulleys never hold up with miles. Deformed aluminum pulley teeth will lead to saggy belts. Saggy belts and saggy t... are not a good look. For a bike that gets ridden, steel is the only way to go as it relates to the belt running hard against the front and rear pulley teeth. Steel is also the material of choice for the clutch basket. When a bike is launched hard, the clutch plates aggressively spank the reciprocal flanks on the clutch basket. Deformed aluminum flanks will lead to increased clutch rattle noise, grabby clutch engagement, and hard shifting 1.54 pulley ratio with a 28 tooth pulley on front and a 43 in the rear for a 7% increase in torque to the rear wheel on stock Softails from 90-06. The Baker Synchronous Belt Drive for Softail provided added support to your transmission main shaft too! More so than any available design in the market, the inner clutch hub reaches farther on the mainshaft towards the pulley nut. This reduces flex and stress on the mainshaft.

- Motor plate and edge guard are made of 6061-T6 plate stock. Pulley caps and dog bone are made of 6061-T6 forgings
- 10 plate clutch
- 2.4" wide belt 14mm large tooth belt for extra bite
- Available with or without the outside bearing support (dog bone), however the dog bone configuration is highly recommended for those with Tourette's Syndrome in the right hand
- Available in show polished or black anodized finishes
- Anti-rattle hardware designed for silent operation when stopped idling with the clutch disengaged

- 696667** BAKER Synchronous belt drive for Softail models 90-06, black
- 696668** BAKER Synchronous belt drive for Softail models 90-06, polished
- 655792** Replacement 82 tooth belt by Baker

'SS-2' 2" Belt Drives by BDL

These all-new 2" drives feature one-piece billet motor plates, and one-piece billet covers to enclose the belt drives. A new clutch design eliminates clutch dogs and features an internal mill-cut basket to drive the clutch. The newly designed ball bearing lock-up Kevlar clutch provides 30% more contact surface than the standard 3" drive, and the new clutch design offers a super quiet ride with tremendous clutch engagement. The all-new clutch and belt design will hold all of the horsepower you can put to it. They fit all Softail models from 90-06.

- 612254** Without cover
- 612257** With black cover
