

Complete "Open Belt" Primary Drive Kit for 4-Speed Cases

Another primary drive kit from the "Jammer" Tech boys. Developed while putting together our "Jumpin' Bail" bike and designed to be used in both rigid and swingarm models, this kit gives your bike an old school look with the benefit of electric start. To be used with 4-speed transmissions or 4, 5, or 6 speed transmissions in a 4-speed case with no modifications required. This kit includes such items as billet bearing support, ProFlex 4 gauge black jacket cable, BDL belt, 47 tooth front & 76 tooth rear pulleys, 5-finger clutch hub and clutch set, starter & high-output charging system, adjustable transmission mounting plate, hardware and more. This is the kit you need to install an "Open Belt Drive" primary to our Pandemonium or S&S Shovelhead engines and a transmission using a 4-speed case. One convenient kit that'll save you time and money... sweet!

Bad Attitude Primary Cover

Want to adjust your bike's attitude and add some old-school style to your modern iron? Check out the Bad Attitude primary cover. It bolts right up to a 3" BDL drive with the motor plate, and it easily adapted to other belt drive systems with owner-fabricated mounts. The space between the fins is open so you can see through to the pulleys. This item has a full polished finish. Because of the nature of cast aluminum parts there my small imperfections in the finish. BDL recently changed the cover bolt pattern on their primary drive. If you have a drive made prior to 07 this will bolt up as-is. If you have the newer drive you will need our adapter kit. To be able to tell whether you need the adapter or not measure the vertical spacing on the rear cover mounting bolt holes. If it is 4" you don't need the adapter, if it is 4.5" you need the adapter. This item measures approximately 18.5" wide X 2.0" deep X 10.0" high.

BDL Polished Aluminum Alternator Cover for 3" Open Belt Drives

Add some sparkle to that often overlooked spot on 3" open belt drives. This heavy gauge polished aluminum cover has a mirror finish that will bring out the best in your belt drive. Cover installs on alternator shaft between the alternator rotor and belt drive pulley. No extra mounting hardware required.

071084 Fits all 3" open belt drives

84626

Primo 'Equalizer' Motor Plate Kit

The slotted end permits mounting on adjustable transmissions. The equalizer provides the needed support between engine and transmission when you're eliminating the inner primary for open belt drive mounting.

84626 Fits open belt drives on Shovelhead Big Twins 70-84
