

JOS 'Bone' 39 mm Fork Conversion Kits with TÜV

These billet kits will convert your 88-11 Sportster, FXR or Dyna Glide model with 39 mm fork tubes to the width of a Wide Glide front fork. The upper and lower trees are CNC-machined with grooves and highly-polished to a unique bone-shape. They're available in stock or 5° rake versions and come with all necessary parts for a quick conversion. Every kit includes the axle, fender spacers, a disc rotor spacer and stainless steel bolts. A second rotor spacer is required if you have a dual disc model. The steering stems are pressed into the lower plate and double-locked with a set screw. The fork stop, headlight mount and riser holes are pre-drilled for your convenience. A stem nut is not included, but any aftermarket nut with 5/8"-18 x 1" thread can be used. We recommend the use of +2" over length fork tubes with the 5° rake kit to retain the stock ride height. If you re-use the stock length tubes you will lower the front of the bike.

For 04-05 Dyna Glide Models

687006 Stock rake for FXD models

687007 5° rake

Wide Glide conversion kit for 08-13 Sportster Models

682873 Stock rake

682874 5° rake
