

★ DYNA ★

Dyna 06-14 Fender for 240 Tire by Fred Kodlin

A superb fender option for your Dyna model: Designed for Harley-Davidson's popular Street Bob, this fender offers smooth lines and is literally „bolt on“ for a spectacular look. Integrated fender struts for superb strength with a short-cut rear end that supports both „old school“ and „performance“ styles. Serves rear tire sizes of up to 240 and works great with Fred Kodlin Dyna swingarm kit (CCE 685705) and Street Bob tank cover (CCE 685706). Fender comes raw finish.

Rocket Bob Voodoo Dyna 06-14 Fender Kits

These fenders fits Dyna models 06-14 and are designed the length you see for the struts, however we also offer a + 70mm version to accommodate a 2up seat. Struts are CNC milled & pressed 10 mm plate, with inner blind holes so the fender mounts out of sight to keep a clean line. There is a captive nut on the fender to accept OEM seats or aftermarket seats. The rear cross brace plate is supplied with shims so that you can alter the height of the fender off the rear tyre. This means that if you lower your ride or change up to an 18" wheel etc, the fender will adapt.
