

Performance Machine Contour Forward Controls

The 11/16" Contour master cylinder integrates racing technology in both the push rod and piston for less effort at the pedal. Contour Forward Controls are designed to work with PM Brake Systems as well as OEM and other aftermarket brakes. Now available for both stock kickstands and customs that use frame mounted kickstand (Left side does not have bracket or mounting holes for OEM style kickstand) for a clean smooth look. Brake Pedal Assembly: Forward mount brake pedal is manufactured from billet aluminum with stainless steel shaft for strength and long life. The brake pedal is mounted forward of the foot pedal for ease of use and is fully adjustable. Arms ride on Teflon bearings for a perfectly smooth, corrosion free operation. Shift Pedal Assembly: Manufactured from billet aluminum and stainless steel. The shift lever is fully adjustable, rides on Teflon bearings and utilizes the stock HD kickstand and return Foot Pegs: The Round style and original Contour foot pegs are uniquely designed for comfort and style. The new easy to replace rubber inserts provide a non-slip surface and protect the pegs. The pivot is completely redesigned and is now polished stainless steel. Foot Pedals: The rubber inserts and rubber wrapped pedals provide a non slip surface and protect the pedals. The brake side pedal is mounted forward of the foot peg for immediate braking response without lifting your foot from the foot peg and is fully adjustable. Master Cylinder: The Contour master cylinder is designed to match our handlebar controls and features an 11/16" piston for the ultimate in braking power and feel.

Contour forward control kits for Softail models from 84-99
