

**JOKER JX Series Hand Controls**

Available in our super durable deep hard black anodize finish. Designed with a special bushing that doubles as a mirror shaft mount for an extra clean look (eliminating an un-used mirror hole). Mirrors are not included. Also provided with a stylish solid stainless steel pivot pin for non-mirror applications. Unique master cylinder reservoir cap screws on to provide instant access to brake fluid without having to use a wrench! Looks super clean also! Features Joker's exclusive self-lubricating polymer piston and seal kits also produced by Joker. Special ball bearing-actuated piston rides in a "Hard Surface Roller Burnished Bore" for more precise feel and longer life as the bearing glides across the piston as you engage the brake. Matching cable clutch control unit also available. DOT5

**JOKER'S Rocker Switch Housings durable hard black anodized!**

Switch housings with all industry standard button features (INCLUDING INTERNATIONAL SYMBOLS ENGRAVED ONTO THEM) are available separately. Controls and brake light switches feature high quality marquardt waterproof, dustproof and heat resistant switches for brake, turn signal, horn and kill switch functions. Specially designed billet switch buttons are retained inside the housing to prevent falling out from the front. Wiring is designed to be installed inside of the bars for a super-sano look!

- 653649** Right rocker switch housing
- 653647** Left rocker switch housing

**Custom hand control spacers in JOKER'S durable hard black anodized!**

These billet hand control spacers work with nearly every 1-inch bar (including powder coated ones) on the market and is secured by a set screw that can be rotated underneath to hide it for an extra clean look! For use with Joker JX controls on applications where a switch housing is needed, but you still want to fill in that gap between the hand control and grip. This piece is also designed to balance out the left side spacing where the right side has the throttle housing.
