

LSL Adjustable CNC-Made Billet Levers

The right length, ergonomical shape and an optimum of curving rules the clutch and brakepoint feeling. The LSL levers can be adjusted in 6 positions with a small easy to reach handle which moves an elliptical adjuster in a ball bearing support. The pivot and axles bushings are made of brass for a long lasting live of the levers. A convenient cut out at the end works as break section and makes them still usable after a slider or little crash. Available in silver, black or gold anodized version. The levers come with ABE to be used in a legal way.

LSL brake lever
