Custom Chrome OptiGlanz Cleaner For Stainless Steel Surfaces

The best you can get for cleaning stainless steel rims, exhausts or other items made of stainless steel. Just spray on and wait 1-5 minutes and wash it off with clear water. To add shine you can help with a fine sponge to optimize the result. It's a must to wear proper safety gloves, protecting goggles and clothing because of the acid contents. If contact with eyes or skin use clear water to wash out and contact a doctor. Keep out of reach of children. Please do not use in closed rooms.

Product info:

OptiGlanz cleaner is a high intensity cleaner for all stainless steel surfaces and does (under normal circumstances) not harm paint, chrome, rubber or plastic. To protect your bike use it on a hidden place first. Do not spray on hot surfaces! Biologically degradable, do not stock over 35°C.
